Phone: (234) 7076-2259-74 | Email: nommohhayab@outlook.com | Location: Minna, Niger State, Nigeria (Open to Remote / Hybrid -- Lagos & Africa) | GitHub: github.com/naiih001 | Portfolio: naiih001.github.io

Senior Backend Engineer -- Node.js / TypeScript | PostgreSQL | REST APIs | Microservices

Summary

Senior Backend Engineer with 5+ years building and operating production-grade REST APIs and microservices for payments, SaaS, and marketplace platforms. Expert in Node.js/TypeScript (NestJS, Express), PostgreSQL + Prisma, Redis/BullMQ, and Docker/Linux with CI/CD. Track record of owning features end-to-end -- from design and data modeling through deployment and production support -- including payment/subscription flows, webhook handling, auth, and background processing. Handled 1,000+ monthly high-value transactions at 99% success rate and services for 2,000+ users; cut release cycles by 60% and production errors by 40% through CI/CD and containerization. Strong CS fundamentals (B.S. Computer Science, FUT Minna, 2024 -- GPA 4.39/5.0). Collaborative, fast-paced, and comfortable diagnosing production issues independently.

Technical Skills

- **Languages:** TypeScript, JavaScript, SQL, Go, Bash, C++
 - **Backend:** Node.js, NestJS, Express, REST APIs, GraphQL, Microservices, Distributed Systems, Event-Driven Architecture, Socket.io patterns
 - **Databases & ORM:** PostgreSQL, MySQL, MongoDB, Prisma, relational modeling, query optimization, indexing, transaction management
 - **Caching, Queues & Real-time:** Redis, BullMQ, background job processing, rate limiting, caching strategies
 - **Frontend (Full-Stack breadth):** React, Next.js (App Router, Server Components), TypeScript, Tailwind CSS
 - **Integrations & Payments:** Third-party APIs, Pystack (payment/subscription flows), webhook handling (idempotent), authentication & authorization (JWT, RBAC)
 - **Infrastructure & DevOps:** Docker, Docker Compose, AWS (S3), GitHub Actions, CI/CD, Linux, Git
 - **Testing & Quality:** Vitest, Jest, Playwright, unit & e2e testing, Swagger/OpenAPI documentation, code reviews, monitoring & error tracking
-

Work Experience

Backend Engineer -- Uptime Tech -- Lagos, Nigeria -- Apr 2026 - Jul 2026

- Built and maintained NestJS/Express TypeScript REST APIs powering core platform features with PostgreSQL + Prisma, emphasizing correctness, reliability, and clean relational data models.
- Developed predictive-maintenance services and supporting API routes (pagination, filtering, transaction integrity) consumed by internal dashboards.
- Improved automated test coverage (Vitest) and reduced production regressions; diagnosed production issues and participated in code reviews in an agile team.
- Containerized services with Docker and shipped via GitHub Actions CI/CD on Linux.

Web3 Backend Engineer -- Kat's & Co -- Remote, Canada -- Jan 2024 - Feb 2026

- Designed and operated Node.js backend microservices handling 1,000+ monthly high-value transactions with 99% success rate, including robust payment flows, state management, idempotent processing, and secure auth.
- Architected Docker-based CI/CD pipelines on Linux, cutting release cycles by 60% and production errors by 40%.
- Collaborated with frontend teams to deliver production TypeScript APIs with caching, background processing (Redis/BullMQ patterns), and authorization.
- Investigated and resolved production incidents while maintaining high availability for transaction-critical systems.

Backend Engineer -- Freelance -- Lagos, Nigeria -- Feb 2021 - Nov 2023

- Built Node.js and Go microservices and REST APIs serving 2,000+ users, improving response times by 35% through

query optimization and service design.

- Optimized PostgreSQL queries and service performance, reducing latency by 30% and error rates by 25%.
 - Delivered reliable data models, third-party integrations, and thorough code reviews across shared projects; supported deployment and ongoing maintenance on Docker/Linux.
-

Projects -- github.com/naiih001

ProTask API -- NestJS, PostgreSQL, Prisma, JWT, BullMQ, Redis, Docker -- github.com/naiih001/protask

Multi-tenant task-management REST API with full RBAC across normalized tables (users, teams, projects, tasks, comments). Implemented JWT auth, role-based guards, team invites, activity logging, pagination, filtering, rate limiting, and background job processing.

PayFlow API -- NestJS, PostgreSQL, Prisma, Paystack, BullMQ, Redis, Docker -- github.com/naiih001/payflow

SaaS payment and subscription backend with idempotent webhook handling, plan-based feature gating, subscription lifecycle management, and secure payment flows -- reusable for wallets, escrow, and bookings.

E-Commerce Backend -- Go, Gin, PostgreSQL, JWT, Docker -- github.com/naiih001/e-commerce-backend

Go microservice with clean REST API design, JWT auth, relational modeling, and containerized deployment -- demonstrates Go concurrency and service design transferable across stacks.

Education

B.S. Computer Science -- Federal University of Technology, Minna -- 2024

GPA 4.39/5.0 -- Strong foundations in algorithms, data structures, OOP, and systems programming (C++, Go).

Open Source & Community

- Contributor: Judgment Pack Gateway -- 6 PRs improving cryptographic attestation security and input validation -- github.com/naiih001/judgment-pack-gateway
- Contributor: Logos scripting language -- package manager CLI and test runner
- Creator: Logos LGS -- VS Code extension (syntax highlighting & language support)
- Speaker: Local Meetups -- 12+ talks on backend engineering and tooling
